Changes to Spa Bracelet integration

- Operation state included in confirmation operation.
- Operation state included in customer reply.
- 'Check in' and 'Check out' functions are now available as separate buttons in POS.

Issues Fixed

Critical and Severe Issues fixed:

- **Pre-orders and KDS**: fixed an issue where Pre-orders did not show up on KDS when it was started on TOB. (#7741)

- **Unicom integration**: when selling, it is no longer possible to enter gift voucher values when that are smaller than 1. Instead, an input error is displayed, and the value field highlighted. This prevents inconsistencies where a 0 value was sent to Unicom when a non-zero value was entered into the POS, thus making it seem like a voucher with value was sold even though it was not. (#7743)

- **Unicom integration**: it is no longer possible to use the 'financial transaction with refund' function which caused some issues with the Unicom integration. If an attempt is made to do this, the POS traps it and displays a pop-up message instructing the cashier to use transaction void instead. (#7747)

- **Reports**: fixed an issue where reports did not work if period 'last hour' was selected. (#7771)

Other Issues fixed:

- **Invoices**: fixed invoice rounding issues (#5984)

- **Deposit functionality**: fixed the following issues. (#7744)
  - Certain recipe articles not triggering deposit articles.
  - When using EAN code, fixed the following issues:
    - When deleting main article row, the deposit was not automatically deleted.
    - It was possible to only delete the deposit article (the main article remained in the basket).

- **Reports**: fix made to report '114 – Payment export' so that it no longer generates an error when running with MSSQL database. (#7765)

- **Unicom integration**: fixed issue where voiding voiding Unicom payments and financial transactions did not work. (#7773)

- **Kitchen printer**: alternative kitchen printer now also works when an item is part of a menu type article. (#7620)

- **Spa bracelet integration**: removed message about missing suspended receipts in Spa checkout. (#7713)

- **EcEle**: fixed issue with EcEle trying to read the whole WarrantyTable, resulting in an overflow.

- **Elisa SOAP Client**: parameters added for Elisa SOAP client.

- **POS Stock Movement**: fixed an issue which occurred when using POS stock movement in combination with using 'Delete line 2'. (#7739)

- **SAP Interface**: fixes to check on ProfitCenter number instead of ProfitCenter area.

- **Preset buttons**: it is now possible to set the number of rows to 0 in Preset Buttons. If the number of rows are 0, then no Preset Buttons or Tab is displayed in POS.
