Winpos Mega - Version 1045 SP8 Release

20 February 2024

Issues Fixed

Critical and Severe Issues fixed

Issues Fixed

Critical and Severe Issues fixed

- **REG ('Restricted article functionality')**: Resolved an issue with 'Restricted Article' functionality in REG (**#2199**)

NOTE: This functionality was originally released in version 1044 (#484).

From the original specification:

Restricted Articles are affected as follows in REG:

1. *They will not be visible in Article search functions*
2. *They will be prevented from being added into the Sale basket by scanning or keying in the barcode or article Plu Code*
3. *They will Be prevented from being used in other Article-specific functions in the REG (e.g. Price Enquiry)*
4. *Further requirement:*
 - *if more than one Article has the same "Ean-number" (Article code2)*

AND

- **only one (1) of these Articles is NOT restricted, then that un-restricted Article should be added to the sales basket automatically, without the search window popping up //Fixed**

E.g.

Article 1111 has Article Code 2 = 123

Article 2222 has Article Code 2 = 123

Terminal 967 is assigned Limits: Article Min 1000, Article Max 1999

ArticleLimitMinMax = True

In REG:

Article Code 2 = 123 is scanned in REG on Terminal 967

REG loads Article 1111 into Sales Basket automatically

- **Self-service:** Fixed an issue where Security Element (e.g. Age restriction checks) did not work with self-service. Now works as follows:

If Parameter > Setting > Self service.Message confirm by manager = Yes

AND

no 'Security Element picture' is used

THEN

self-service will ask for Manager confirmation when adding an age-restricted article to the basket. (**#1959**)

- **Self-service:** Fixed an issue with one-shot buttons and Type 136 'Article pop up - Article group' so that the text is now correctly aligned (**#7955**)
