Release Notes

Winpos Mega - Version 1046 SP5 Release

16 April 2024

Issues Fixed

Issues Fixed

- **Kitchen display (Pick n Pay orders):** Fixed an issue where 'Eat here' Pick n Pay orders were shown as 'Take away' on KDS. (**#2599**)
- **Kitchen printers:** Kitchen printers now print correct text associated with the correct article and printers. (**#2351/#2499**)
- **POS/REG:** Improved POS speed when adding articles to sales basket in the following case: *Old DB layout + Dual screen + Setting Reg.Deposit article = 'Add row + dual screen'*. (**#2609**)
- **PreOrder:** Fixed an issue where adding an additional article to the basket after an article with multi-select recipe items, caused the selected receipt items to be discarded. (**#2558**)
- **Pricelist ('Copy pricelist' and 'Schedule task'):** Fixed issues so that this now works correctly in HQ/Branch/Client configurations (bServer/bClient). (**#2028**)
- **Self-service:**
 - Resolved problem where network issues could result in self-service getting stuck showing only a white screen.
 - Now, when self-service tries to connect to the server it displays a message "Processing data, please wait". The message will close when data processing is completed. In the event of a connection issue, the message will remain on screen until resolved.
 - Made improvements for handling network-related issues(**#2537**)
- **Winpos Mobile - performance:** Made changes to improve performance when handling recipe articles in Winpos Mobile sales basket. (**#2550**)
- **Winpos Mobile - error message:** Minor change made to improve error message displayed when quantity or price in sales basket is too large. (**#2575**)
