Softpay tipping support (#2983)

Sunmi receipt printing (#3196)

Issues Fixed

Mobile App

Mobile App (Fixed in Mega (MobileMega3.DLL))

Backend

---

### Enhancements & Changes

#### Kitchen display (#2701)

The KDS built into the Mobile App is now automatically refreshed when new orders arrive. A notification message is also displayed on the device which is running the Mobile KDS.

#### Integration with Planet Payment card payment solution (#2350)

Winpos Mobile is now integrated with the Planet Payment card payment solution.

#### Softpay tipping support (#2983)

Added support for Softpay tipping to the Mobile App.

## Sunmi receipt printing (#3196)

Made changes to support different printers and number of characters per line on Sunmi devices.

Added a new Parameter setting: **Mobile App.Sunmi characters per line =**

Where:

- Default = empty (behaviour as existing)
  - Value nn = number of characters printed per line using the Sunmi device's own receipt printer.
- 

## Issues Fixed

### Mobile App

- **Cash Drawer:** Fixed an issue where a cash drawer would not fire from the Mobile App in the following scenario:
  - Network receipt printer
  - Cash drawer attached to the receipt printer
  - Payment method used in Mobile App has cash drawer enabled

The cash drawer will now fire from the Mobile App. (#3039)

- **General:** Improved handling where the App starts and there is no server connection. App no longer goes to configuration settings, but instead displays an error message. (#2803)
- **General:** Fixed an issue with 'display remarks' functionality. (#2829)
- **General:** Fixed an issue where setting '*REG.Modifiers is asked automatically*' resulted in a 'CalculatePrice' error in the Mobile App. (#3186)
- **General:** When printing receipts from the mobile device (e.g. Sunmi), the number of prints in the database is now correctly updated. (#3192)
- **General:** The Mobile App will now display an error message if the backend is an older version than the App. Note: this check is made on the first two parts of the version number, the third part is ignored e.g. 1.5.x vs 1.4.x (#3234)
- **General:** Fixed a bug where the receipt total was incorrect with certain combinations of sub-receipt and adding the basket to the same suspended receipt multiple times. (#3281)
- **Guest amount on receipt (Function button #30):** The correct number of Guests is now printed on receipts. (#3228)
- **Guest check group (Function button #60):** Fixed a bug which stopped this function button from working correctly. Occurred in cases with multiple table layouts having the same table numbers on different layouts. (#3233)
- **Guest checks/Tables:** Fixed an issue where it was possible to log out whilst a table was open with items on it. Issue resulted in locked tables. (#2896)
- **Guest checks/Tables:** Fixed a bug where deleting or changing the article quantity on a table did not update the information to the KDS/printer. (#3217)

- **Guest checks/Tables:** Mobile App no longer crashes when pressing table button and sales basket button consecutively. (**#3250**)
- **Guest checks/Tables:** Fixed a bug where it was possible to open the Guest check table layout multiple times, resulting in locked tables. (**#3260**)
- **Guest checks/Tables - List mode:** The 'Chair open' indicator is now working. (**#3235**)
- **Kitchen display (App):** Fixed an issue in the App's KDS so that it now shows the Order Number value correctly. (**#2192**)
- **Kitchen orders:** Issues resolved: (**#2686**)
  - Quantity if no longer output on kitchen texts when using Function button 84 'Kitchen orders'.
  - Negative rows are now shown in red text.
- **Kitchen printing:** Fixed an issue with function button 18 'Add text' where the text was not printed to the kitchen. (**#2703**)
- **Kitchen printing:** Resolved an issue with parameter setting Kitchen.Sales basket consolidate. If set, it now works in Winpos Mobile even if multiples of the same article is added and one of them has additional text. (**#2734**)
- **Login screen:** Fixed an issue where the username text on the login screen was always in English instead of using language settings. (**#2837**)
- **Manager rights:** Fixed issue where restriction '*Change guest checks group although there are open guest checks*' was not applied correctly. (**#3222**)
- **Payment method - additional information:** If Payment method additional information field has a value, a confirmation prompt is now correctly displayed before the payment is added. (**#3237**)
- **Payment method - Gift Vouchers:** Fixed issues with using Gift Vouchers as a Payment method. (**#3240**)
- **Sales Dashboard (App):** Added multi-lingual support. 12 different languages are now supported. Support also added for different date and time settings. The user can select the language to use from a drop-down menu in the Sales Dashboard screen.

NOTE: On some devices using Winpos Mobile this may not automatically work without clearing data on the device for the Winpos Mobile App (e.g. within 'App settings' in android on the device). Additional note: clearing the Winpos Mobile App settings will clear all the settings for the App on that device so it will need to be setup again.

(**#2291**)

- **Sales Dashboard (App):** Fixed printing of PDF files from the App Sales Dashboard. (**#2306**)
- **Sales Dashboard (App):** Fixed so that starting the App using mobile start-up parameter 57 - 'Sales Dashboard' now loads the correct dashboard. (**#2889**)
- **Softpay:** Improved handling of certain error situations and cancelling Softpay payments. (**#2901**)
- **Stock functions:** Stock functions in the Mobile app no longer display messages staying 'Waste'. Instead, the correct name for the function being used is displayed. (**#3242**)
- **Sub-recipes:** Added support for sub-recipes. This resolves 'CalculatePrice' errors relating to sub-recipes. (**#2804**)

## Mobile App (Fixed in Mega (MobileMega3.DLL))

- **Guest amount on receipts:** The Guest amount on Mobile App printed receipts is now showing the correct amounts. **(Fixed in Mega v1047 SP1) (#3228)**
- **Guest Checks:** fixed a an issue where is was not possible to close a table/pay an open table in the Mobile App if the Computer Name in Terminal maintenance was empty. **(Fixed in Mega v1047) (#2208)**
- **Kitchen printing:** Fixed an issue which meant that the article quantity was not output on kitchen prints. This occurred with existing parameter setting *Kitchen.Print unit = True* and when more than one article was sold in Winpos Mobile. **(Fixed in Mega v1047) (#2194)**

## Backend

- **General:** Fixed a issue where the Mobile App would not work if the database setup did not include at least 1 one-shot button with 'Level 1' **(#3194)**
- **Guest check group (Function button #60):** Fixed a bug which stopped this function button from working correctly. Occurred in cases with multiple table layouts having the same tables numbers on different layouts. **(#3233)**
- **Manager rights:** Fixed issue where restriction '*Change guest checks group although there are open guest checks*' was not applied correctly. **(#3222)**
- **Sales dashboard:** Fixed a bug where logging into Sales dashboard with a new password would then request a new password to be entered again at next login attempt, even though the previous new password is still valid. **(#2746)**
- **User rights:** Fixed an issue where the App did not always use the correct user rights when switching between users. **(#3223)**
