POSServiceAPI v1.5.19

GrpcMobileDLL (new version 1048.2.0)

Mega release v1047 SP13

MobileMega3.dll

Issues Fixed

---

## Issues Fixed

- Fixed an issue so that using function button 111 (Self-service) does not give an error message when using an MSSQL database **(#3464) (POSServiceAPI)**
- Fixed an issue where using Payment method type 2 (Invoice) and adding a reference via the Mobile App did not add the reference to the invoice. **(#3480) (GrpcMobileDll)**
- Fixed an issue where it was possible in the Mobile App to use Financial Transactions whilst using any of the stock functions. **(#3248) (POSServiceAPI & GrpcMobileDll)**
- Fixed issues with Mobile App where slow down and unexpected errors could be generated when the system was operating under high pressure. Occurred especially with systems using Control unit (but problems not limited to that environment, please see also comment below).

**It is highly recommended to upgrade to this version if the system is using the Mobile App with many terminals per worker. (#3556) (GrpcMobileDll)**
